## Guidance on Health and Safety For Maintenance and Facilities Maintenance Employees during COVID-19

### **OVERVIEW**

This is not a legal document and employers are advised to seek legal advice.

Employers and constructors have obligations to protect workers from hazards in the workplace as set out in the *Occupational Health and Safety Act (OHS)* and its regulations and the directives coming from the Chief Medical Officer of Health.

Workers should raise any concerns to their:

- supervisor
- joint health and safety committee
- health and safety representative

This will help ensure the employer has taken all reasonable precautions.

Ontario is currently in the midst of a global pandemic. While the COVID-19 situation is changing rapidly, the legislation and regulations used to govern Ontario's workplaces are not.

Under Ontario law, employers have the duty to keep workers and work sites safe and free of hazards. Workers have the right to refuse unsafe work. If health and safety concerns are not resolved internally, a worker can seek enforcement by filing a complaint with the ministry's Health and Safety Contact Centre at 1-877-202-0008. Failure of the employer or constructor to comply with the OHS and its regulations could result in a stop-work order upon inspection by the Ministry of Labour, Training and Skills Development.

### **BEST PRACTICES**

We know that every workplace is unique. That makes it so important that every workplace assess functions carried out by their workforce to ensure they take action to protect against the hazards presented by COVID-19.

Things like proper hand hygiene, keeping surfaces and objects clean and physical distancing (staying 2 metres apart) to prevent close contact with potentially infected people are all critically important measures. Other information on how you can protect yourself is available on [ontario.ca/coronavirus](https://ontario.ca/coronavirus).

We have provided some protection advice below for your consideration. Please keep in mind that introducing any new protective measures should be done as part of a full review of other workplace hazards -- not just COVID 19 alone. Employers should consult with Joint Health and Safety Committees/Health and Safety Representatives in the workplace on measures to protect workers in the workplace. We want to ensure we enhance our safety, not cause other issues.

Some workplaces already have some existing controls in place that may help reduce the risk of exposure to workers as well, so regular 'check-ins' on how controls are helping is highly recommended.

### **RECOGNIZE HAZARD/ASSESS RISKS**

For maintenance workers and facilities maintenance employees, we recognize that you may have contact with co-workers and surfaces, such as tools, equipment and machinery as you go about your work. You could also potentially come in contact with respiratory droplets from these interactions. COVID-19 can travel in respiratory droplets that are released into the environment by laughing, coughing or sneezing.

Take a look at where you might minimize those risks within your workplace. Consult public health information to learn the symptoms of COVID-19 infection. Recognize and report these hazards and use appropriate controls. Ensure that you or your co-workers stay home if you or they have symptoms.

We understand – so it's important to take a look at where you can possibly minimize those risks within your workplace. Take a look at the controls below to see how they might help you.

## **CONTROLS**

To protect yourself from some of these hazards consider the following options:

- Proper handwashing is key. Use good hand washing technique and avoid touching your face. Extra handwashing is a good idea for everyone – and when that's not possible, a good hand sanitizer should be used frequently. Consider disinfecting your hands after interacting with co-workers or completing tasks.
- Integrate physical distancing (staying metres away from others) in job activities. Are there tasks you can minimize or eliminate? For example, can non-essential tasks be eliminated or postponed? Can you control and limit the number of people in a workspace at one time? Consider designated work spaces, flow of people, or changing shift and break schedules to limit the number of people in the lunchroom, change room and workspace at one time.
- Increase your cleaning frequency on everything from tools to commonly touched surfaces like door handles or switches. Be sure to follow safe practices and use an appropriate cleaning agent.
- Can you improve fresh air intake/air circulation with open doors and windows or fans? Increased airflow may reduce contaminant build up. Be sure to maintain the ventilation system in good order.
- Can you put barriers in place between yourself and the people or product you have to interact with? For example, can a partition be placed between workers?
- Keep up with the best. Consider regular times to check in with public health updates and retrain/revise practices as needed.
- Ensure that measures you decide on are communicated to workers.

If the above recommendations are still not enough for your workplace, as a last resort, consider Personal Protective Equipment (PPE). PPE is only effective if people wear it correctly. Workers need PPE training that includes the fit, use, care, maintenance, cleaning and limitations of the PPE.

Some examples of PPE that may be suited to maintenance workers' work include:

- Gloves – single use gloves can help limit skin contact with surfaces, product, etc. Be sure to set up practices for proper removal of gloves and suitable disposal or changing when they are soiled. It's also important to consider other hazards present in the workplace before introducing gloves – in some cases, gloves can be an entanglement hazard and should not be worn.
- Goggles or face shields – can help with barriers and separation too. They should be assigned to people and not shared and can be used regularly if kept clean. Ensure the goggle or face shield use does not result in workers touching their faces more often because of heat or discomfort.

## **EVALUATION**

COVID 19 has presented all of us with challenges we have never seen before. It's important to consider that any of the adjustments we are making today, may need further adjustment tomorrow.

It is recommended that you take a look at your preventative measures on an ongoing basis, and adjust them if they are not working well enough or causing other issues with your work. For example, if you decided to use goggles, but they are fogging up and making other tasks unnecessarily difficult, you may want to try a face shield instead. Or if you decided you needed a certain kind of disinfectant and it's no longer available, switching to good soap and water practices may be a reasonable substitute.

Bottom line? Plan to make regular check-ins part of *your* COVID 19 prevention plans.
